

Make a DVD on a PC Using [Freemake Video Converter](http://www.freemake.com/) (<http://www.freemake.com/>)

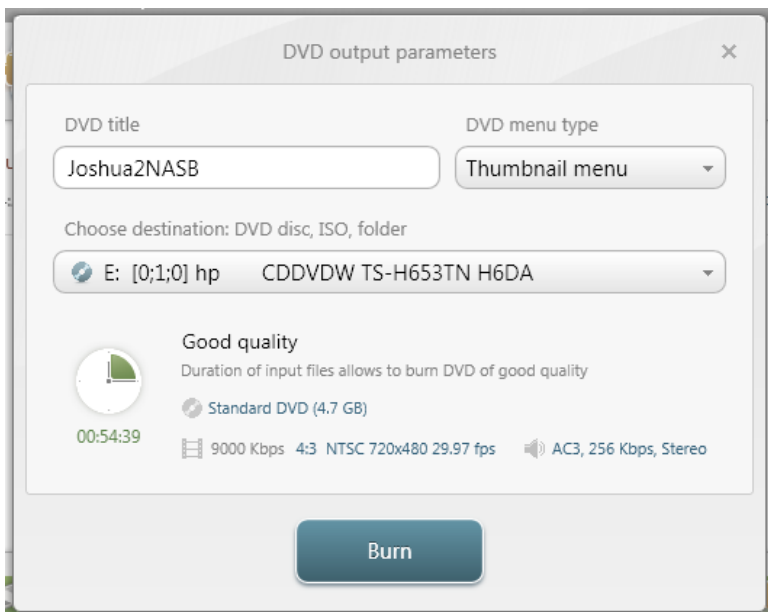

After you've downloaded a video (.m4v), move or copy it into a folder you can easily find.

Step 1. Open “Freemake” Video Converter and Click “Video”.

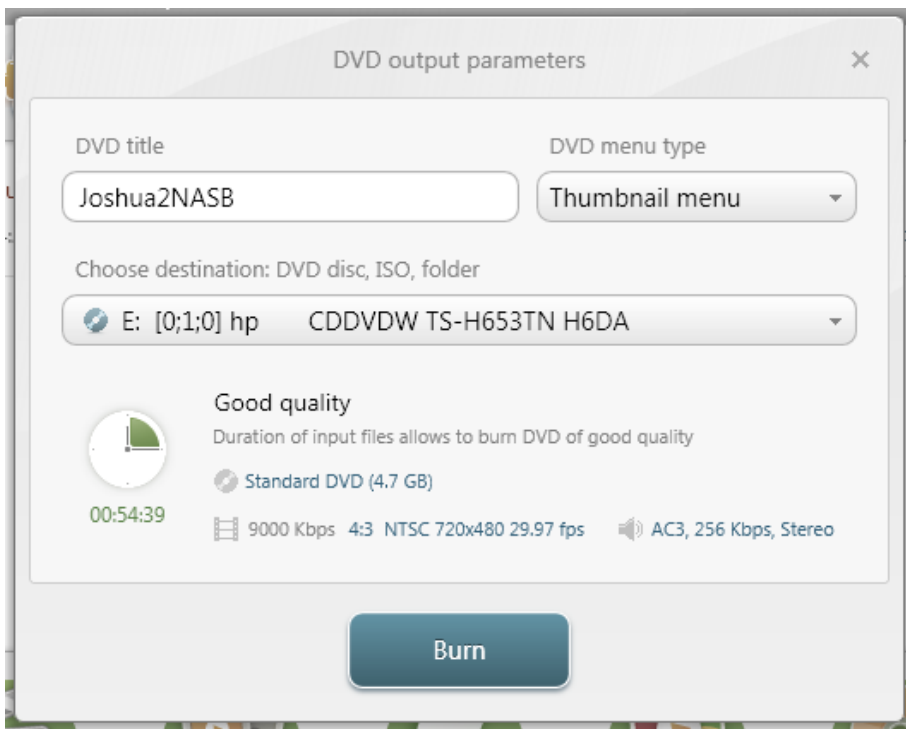

Step 2. In the drop down window, find the downloaded video (.m4v) in the folder and Double Click it. Information about it should appear in the window above.

Step 3. Click “To DVD”. (Bottom row, right side.) The window below will appear.

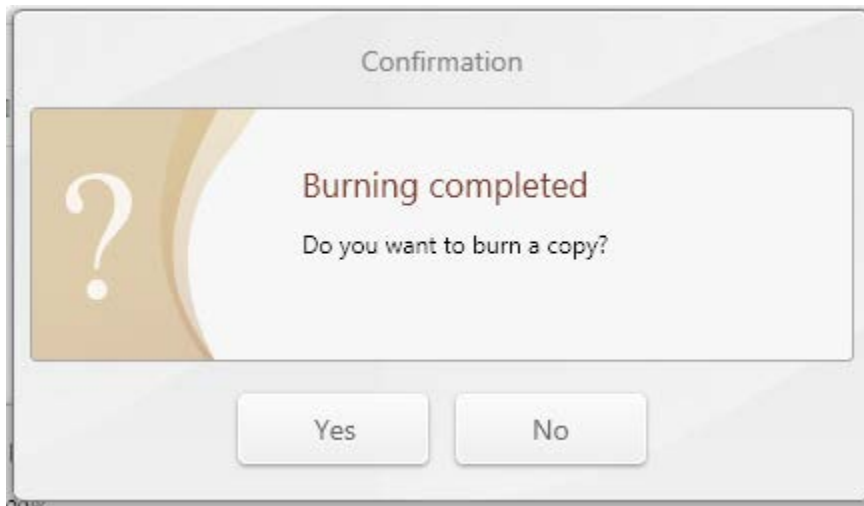

Step 4. Select a “DVD menu type” (we recommend “Thumbnail menu”) and insert a DVD (Not a CD) into your PC’s DVD drive.

Click the “Burn” button at the bottom (see image above step 4). If the window below appears, X out of it. As indicated by the arrow, it would use a program you may not have (Windows DVD Maker) and Click “Burn” again.

Watch your progress it could take about ½ hour or more. When the DVD is complete, the following “Confirmation” pop-up window will appear.

If you want to make additional copies, Click “Yes”. They will take only 4 to 10 minutes each.
